

The Atlas of Access Topologies – Possest–PQF

This atlas contains core operators within the Possest–PQF filtration framework. Each symbol corresponds to a bifurcational or r

δ^* – Recursive bifurcation cut

Local disruption and redirection of access flow; it marks a split that is not reversible.

Ψ – Refrenic memory

Non-linear pattern storage without representation; recursive echo of inaccessible intensities.

$\mathfrak{S}_{\text{mukh}}$ – Mukh■lafa Operator

Filters unresolved proximity into normativity shock; an act of structured transgression.

■ – Domain of potential access

Always restructured by tension, never static; constantly redefined through rupture.

Tissou – Infinite resonance

Site of unresolved filtration; reverberates rather than collapses.
